Subject: [AKAD_SEKR:2141] application for a position in Robotics

Dear Sir or Madam,

I've read the announcement on the Internet and decided to apply.
I believe I can be useful for the department as well as I have both the industrial and the academic experience.

I've graduated from the recognized University and obtained my M.S. in Computer Science in 1996. I've completed my Ph.D. thesis in 2000 and got Ph.D. degree in computer science.

I worked both in industry and education. In industry I worked as a computer programmer, system analyst and project manager. I managed several research projects - individually or in cooperation with other institutions.

I also have experience of several universities, including Russian, Greek, French and now American Universities (totally 15 years) and supervised numerous SDP projects.

Having this experience I can align my teaching to the practical needs of modern Business and IT industry as well as to the requirements of international and national controlling bodies.

I can also provide strong research leadership for the graduate and undergraduate students.

As a faculty member I have a special interest in Artificial Intelligence (Data Analysis, Decision Making), on-line testing systems, tests databases and anti-plagiarism software tools.

Sincerely yours,

Denis Smolin,
Ph.D., Prof. of American University in Bosnia and Herzegovina
